EDUCATION

University of Michigan — Ann Arbor

B.S. in Computer Science | Cumulative GPA: 3.51/4.0

Ann Arbor, MI

Expected May 2028

- Relevant coursework: Computer Organization (EECS 370), Computer Networks (EECS 489), Computer Security (EECS 388), Data Structures & Algorithms (EECS 281), Discrete Mathematics (EECS 203), Computational Linear Algebra (ROB 101), Introduction to Data Science (DATASCI 101).

TECHNICAL PROJECTS & EMBEDDED SYSTEMS EXPERIENCE

FIRST Robotics Team 3534 — House of Cards

Sept 2020 – May 2024

Lead Programmer / Software & Vision Systems Engineer

Davison, MI

- Led Java-based software development for a competition robot's autonomous navigation and vision-assisted targeting, integrating camera and sensor input with real-time control logic on embedded hardware.
- Mentored newer programmers on code structure, version control, and debugging across a season-long build-and-iterate cycle; team achieved a world-level finalist result.

EECS 388 Introduction to Computer Security — Course Projects

- Exploited hash length-extension and CBC padding-oracle vulnerabilities and forged RSA signatures via Bleichenbacher's attack in a series of applied cryptography exercises.
- Carried out XSS, CSRF, and SQL injection attacks on a vulnerable web app; performed ARP spoofing to intercept network traffic; built buffer-overflow exploits against native binaries with GDB/x86 assembly; and conducted disk/memory forensic analysis of a compromised system.

Printer Downtime Ticket Analytics

2026

- Built a Python workflow to collect, clean, and analyze device service-ticket data, identifying recurring hardware failure patterns and translating support data into an actionable investigation process.

PROFESSIONAL EXPERIENCE

University of Michigan Information & Technology Services

Aug 2024 – Present

Student Manager / Sites Team Lead

Ann Arbor, MI

- Coordinate campus-wide IT support operations, triaging and tracking approximately 100 service tickets per week across a 2,000+ device, 90+ lab environment spanning Windows, macOS, and Linux.
- Directly resolve 30–40 weekly technical issues; investigate recurring hardware and system failures, document troubleshooting steps, verify remediation, and escalate complex cases to specialized teams.
- Train and guide support staff, reinforce documentation standards, and coordinate escalations during high-volume periods.

Davison Community Schools Technology Department

June 2023 – Aug 2024

Level 1 IT Support Specialist

Davison, MI

- Provided Tier 1 technical support for 3,000+ students, teachers, and staff across a ~4,000-device district environment; diagnosed hardware, software, and network issues.
- Improved response efficiency by identifying recurring problems and building repeatable troubleshooting and deployment procedures.

RESEARCH & TECHNICAL INVOLVEMENT

Michigan Edge — Quantitative Sports Analytics Research

Jan 2026 – Present

Research Contributor

Ann Arbor, MI

- Design Python data pipelines to collect, clean, and analyze large sports and market datasets for performance and outcome modeling; build modular simulation and analysis tools evaluating team and player metrics at scale.

WolvSec — University of Michigan Cybersecurity Club / ReliaQuest Cybersecurity Labs

Spring 2026

- Completed hands-on labs in security-operations investigation workflows and AI-assisted alert triage; participate in club workshops on Linux, threat analysis, and networking.

TECHNICAL SKILLS

Languages: Python, C++, C, Java, JavaScript, SQL, Julia

Systems & Tools: Linux/Unix, Windows, macOS, Docker, Google Cloud, Git/GitHub, VS Code, Wireshark

Data & Analysis: pandas, NumPy, BeautifulSoup, Jupyter Notebook, Flask, JSON/CSV
